<b>Change Description:</b>	<p>Change the process of the shell plating from Barrel plating to Continuous plating</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;"> <p><b>Barrel plating</b></p>  </div> <div style="text-align: center;"> <p><b>Continues plating (Reel to Reel plating)</b></p>  </div> </div> <div style="display: flex; justify-content: center; margin-top: 10px;">   </div>		
<b>Reason for Change:</b>	In barell plating, lot of products are plated and gathered together for rotation. Where as in continuous plating, it is reel to reel and there is lesser chance for scratches / deformation of plated parts. So we switch to the continous type plating process.
